## **Fluid Power Application Engineer Wainbee Limited**

### **Job Brief**

Working under the supervision of the Technical Services Manager and in collaboration with various departments such as sales, production, and operations, the Fluid Power Application Engineer's primary mandate is to work on all project stages from research and development to design and manufacture, through to installation and final commissioning. The goal is to design and fabricate hydraulic components and systems that meet the customers need of innovation and excellence.

### **Tasks & Responsibilities**

- Meet with customers and support sales representatives in the development of concepts and industrial hydraulic system solutions
- Working closely with the Technical Sales Representative, prepare project proposals for customers
- Organize and coordinate the activities associated with the project, and ensure to meet deadlines, along with project cost and system performance criteria
- Perform system design. (Make the selection of components and produce the drawings as required)
- Provide technical support to customers, suppliers and internal staff when required
- Participate in the monitoring of installations
- Identify, formulate, and produce effective solutions to emerging problems
- Alter or modify design to meet requirements and to eliminate malfunctions
- Prepare product reports and documentation
- Engage in lifelong learning
