

Monoblock Directional Control Valves, Series HDM11S, now available with Solenoid Operation

HDM11S Single Section*

HDM11S 3-Section*

The Bucher Hydraulics trusted solenoid solution for directional valves is now available in a compact monoblock package. Able to combine manual and solenoid operation valve configurations in one block. Receive the same reliability and performance as original HDM11S manual operation:

- Cast monoblock bodies with high operating pressure ratings
- Ideal in straight-forward applications in which particularly small overall size is required
- Low levels of internal spool leakage
- Operating pressures up to 350 bar
- Eliminates potential leakage between sections
- Low maintenance; simple preservation

*Customization available. Contact your regional sales manager to configure specific valve layouts.
